OFFSET PRINTING

We suggest using the Pantone Matching System to designate PMS ink colors. If you cannot provide a PMS ink number, we are happy to match your provided sample at a charge of \$250.00.

When offset printing on dark paper stocks, please choose light ink colors for best results. Full color reproduction of photographs are best achieved utilizing four-color process. When printing a large solid background in conjunction with screened areas, we strongly encourage using a fifth PMS color. Special coatings are recommended for best protection of heavy ink coverage.

SECOND SIDE PRINTING:

Printing on the inside of a folder (the area above the pockets) requires additional plates and make readies, and therefore carries an additional charge.
